

DATE	MISSING DATA	# OF SCANS	NOTES	WEATHER NOTES			
				Rain	Notes	Insects/clear air?	Notes
19/06/2025	07:50, 07:55, 08:00, 13:40-14:35, 19:05-23:59	265	Setting up the radar, doing checks, issue when radar turned back on during evening	Yes	Convective showers to the south and west	Yes	
20/06/2025	00:00-07:16, 10:30-11:10	277	No data till 07:16. Power socket change.			Yes	Strong out to 50km at 2degs
21/06/2025	None	288		Yes	Small isolated showers first during the afternoon and then larger area of cells during the evening	Yes	
22/06/2025	None	288		No	No precip, only clear-air	Yes	Strong in the morning, beyond 50km at 2 degs, 75km to the west/south west at 1deg
23/06/2025	14:55,15:00	286	Stopped scheduler to run the ZDR calibration scan	Yes	Widespread convection starts mid morning. Very heavy rainfall. Large band moves across the radar mid afternoon	Yes	strong from 05-09, preferentially sitting in a layer at about 4km
24/06/2025	08:00,08:20	286	Changed sector blanking to the NW from 325 to 324. Changed sector blanking to the NW from 324 to 320	No	No precip, only clear-air	Yes	50+km
25/06/2025	None	288		Yes	A few showers to the south during the mid-late afternoon	Yes	50+km
26/06/2025	None	288		Yes	Storms initiate within 10km to the east from 10UTC. Nothing over the radar until 16 UTC. Very heavy rain. Interesting velocity couplet west of the radar 37km 1945	Yes	Very high values within 25km, second trip echoes masking some returns further out
27/06/2025	None	288		Yes	Light showers afternoon and evening	Yes	Weaker, mainly within 25km
28/06/2025	None	288		Yes	Yesterday's showers to the north east continuing in the morning until 07, then dry the rest of the day	Yes	Fairly strong, 50+km west
29/06/2025	None	288		No	No precip, only clear-air	Yes	Very extensive
30/06/2025	13:30, 18:20-20:45, 22:00-23:55	229	13:25 Stopped scheduler to run the ZDR calibration scan. 18:20 Radar overheating due to heat exchanger fans not working, following a breaker trip, due to power switching to generator	Yes	From 10, very intense	Yes	Before convection develops mid morning
01/07/2025	All	0					
02/07/2025	All	0					
03/07/2025	All	0					
04/07/2025	00:00-15:15, 15:50-16:05	113	Breaker reset, radar turned back on	Yes	Only a few showers around after radar back on	Yes	10:55-11:55
05/07/2025		288		Yes	A few showers, broader region of rain to the south west that produces second trip echoes in the morning. Showers to the north and east in the afternoon and over the rain 23-midnight	No	only a few patches in between areas of showers/rain
06/07/2025	04:50, 05:00	286		Yes	Showers from 09, widespread for most of the day	No	
07/07/2025	16:50-23:55	202	Same issue as 30/06, lightning causing mast to go to generator power, causing a surge which tripped our breaker	Yes	Continuing rain from previous day passes by 05, then showers from the west until radar trips out again	No	
08/07/2025	00:00-13:30	138	Radar back on at 13:35	Yes	Widespread - snow? Went below 0 overnight and after 15 and until 07 on 9th	No	
09/07/2025		288		Yes	weak showers from the north dissipating before reaching the radar	No	

DATE	MISSING DATA	# OF SCANS	NOTES	WEATHER NOTES			
10/07/2025		288		Yes	Weak showers to the north east from mid afternoon, nothing over the rain	No	
11/07/2025		288		Yes	Showers moving north west to south east most of the day	No	
12/07/2025		288		Yes	A few light showers during the day, more intense from 17 onwards	Yes	Interesting feature at 1deg between 25-50km to the west. Starts about 0945 and lasts till 1630. Not really visible at 2deg until 12.
13/07/2025		288		Yes	Moderate convection most of the day	No	Only small patches in between some showers
14/07/2025		288		Yes	Broad precipitation from the west, passes by 14	Yes	0730 before rain, then interesting feature that seems to be on the back of the rain (front?) almost following it
15/07/2025		288		Yes	Showers dissipating before reaching the radar in the morning, some heavier bands moving across during the afternoon and evening	Yes	Weak - between 06-11
16/07/2025		288		Yes	Light precip in the morning, heavier bands of showers in the afternoon	No	Only a brief period around 10
17/07/2025		288		Yes	Bands of precip until 06-07, dry the rest of the day	Yes	Weak 10-15
18/07/2025		288		No	Dry day	Yes	Some moderate signals 08-17
19/07/2025		288		Yes	First convective shower to the north east at 12:40, then more widespread to the northwest through northeast. Intense bands late afternoon. Another velocity couplet 1825?	Yes	09-12 UTC before the showers get going
20/07/2025		288		Yes	Showers in a line from the north east to the south of the radar. Broader rain approaches just before midnight	No	
21/07/2025		288		Yes	Main rain band passes to the north by about 05 followed by showers and then a larger bands of very heavy rain mid morning (full attenuation at 12)	No	
22/07/2025		288		Yes	Lights showers to the N and E in the afternoon, then some initiate to the west at about 20 and form a band that moves over the radar through midnight	No	
23/07/2025		288		Yes	Heavy showers initiating to the west 40km range 13UTC. Flooding in Neuhaus. Looks to initiate or be anchored to the same location/orographic feature.	No	
24/07/2025		288		Yes	Heavy rain until 0730, continuing from previous night. Areas of conection during the afternoon. Another large band 19UTC	No	
25/07/2025		288		Yes	Lighter stratiform rain during the morning, more moderate and showery in the afternoon	No	
26/07/2025		288		Yes	Similar to previous day	No	
27/07/2025		288		Yes	Light showers in the morning, heavier in the afternoon	No	
28/07/2025		288		Yes	Unorganised light to moderate rain	No	
29/07/2025		288		Yes	Afternoon/evening light showers	No	Weak echoes around mid to late morning
30/07/2025		288		Yes	Light showers moving northwest to south east	Yes	weak echoes to the south west during the morning

DATE	MISSING DATA	# OF SCANS	NOTES	WEATHER NOTES			
31/07/2025		288		Yes	Similar to previous day	No	
01/08/2025	missing 03:55 and 04:05	286	Strange blip where Rainbow reports an ACU and TX fault.	Yes	Broad region of heavy rain from the west during the morning until noon. Further bands throughout the afternoon and early evening	No	
02/08/2025		288		Yes	More moderate-heavy rain throughout the whole morning moving west to east. Lighter showers from the NW afternoon/evening	No	
03/08/2025		288		A few	A few light showers	Yes	Some weak echoes to the west around midday
04/08/2025		288		Yes	A few light showers	Yes	By 10 UTC some echoes have developed to the west until about 14 UTC when light showers move across the region. A second plume after sunset too.
05/08/2025		288				Yes	Overnight insects disappear around 03 and then morning plume starts around 06. More extensive. 50km to the southwest. Signature of something moving across the domain from NW to SE from 1035 to 1145, which coincides with a decrease in the ZDR signal. From about 1350 onwards, there are some very positive and very negative ZDR signals, which I believe to be military chaff.
06/08/2025		288		Yes	Convection 50km to the south 12-16, anchored to the terrain I think, then some to the west during the late afternoon/evening	Yes	But only weak
07/08/2025		288		No		Yes	Fairly weak during the day, but strong post-sunset bloom, ~1930
08/08/2025		288		No		Yes	Very similar to previous day
09/08/2025		288		No		Yes	Might be filtering out the weaker echoes on the quicklooks. Similar to previous day, even stronger post-sunset bloom
10/08/2025		288		No		Yes	Similar to previous day
11/08/2025		288		No		Yes	Same as previous day, very strong echoes after sunset
12/08/2025		288		Yes	Convective cells start developing around noon and continue throughout the afternoon, remain fairly stationary. One cell develops to the west of the radar about 15km away from 1500	Yes	Weaker echoes during the day, but same post-sunset bloom
13/08/2025		288		Yes	Convective cells from about 1145. A line of stronger cells during the evening from NE to SW.	Yes	Weaker echoes during the day, but same post-sunset bloom
14/08/2025		288		Yes	Deep convection including lightning	Yes	Weaker echoes during the day, but same post-sunset bloom
15/08/2025		288		Yes	Convection starts to the south and west from 10 UTC, continues all day, larger bands forming later on	Yes	Weaker echoes during the day, but same post-sunset bloom. 0835 UTC a strong velocity streak NE to SW.
16/08/2025		287	2350 volume not created. ACU had a brief fault.	Yes	Convection from 0930,	Yes	00-0330, 1830 to 00 UTC
17/08/2025		288		Yes	Moderate showers moving from north to south throughout the day	Yes	00-03 UTC, and 1830 to 00 UTC
18/08/2025		288		No		Yes	Same as previous day

DATE	MISSING DATA	# OF SCANS	NOTES	WEATHER NOTES			
19/08/2025		288		Yes	Convection from about 1230, through the afternoon and evening	Yes	Before sunrise and after sunset, but weaker due to convection around
20/08/2025		288		Yes	Heavy rainfall 00-01, continuing into the morning. Low pressure/troughs/fronts? Moderate showers afternoon and evening	No	There are some, but as there is a lot of rain around, it's not a good case
21/08/2025		288		Yes	Heavy rainfall most of the day, showers then larger bands	No	
22/08/2025		288			Heavy rain to the south initially, showers to the north, cleared by noon, a few light showers in the afternoon, evening at longer range.	Yes	Post-sunset only
23/08/2025		288		Yes	Only light showers during the day	Yes	Weak post-sunset
24/08/2025		288		Yes	Some convection during the afternoon	Yes	9-13 UTC, post-sunset but limited range
25/08/2025		288		No		Yes	strong post sunrise bloom out to the west, 75km, weakens by mid afternoon, very strong post-sunset bloom
26/08/2025		288		No		Yes	Very similar to previous day
27/08/2025		288		Yes	Scattered light rain showers during the morning. Convective showers in the afternoon, some heavy. continuing through the evening	Yes	Before sunrise, nothing much afterwards, due to showers
28/08/2025		288		Yes	Patchy light rain early morning, heavier rain bands from 08 onwards, widespread heavy stratiform rain from 16 onwards. Very windy with passage of squall at ~1705, gust of 53mph. Blew one of the fence panels down.	No	
29/08/2025		288	Blip at 1440 where the TX power dropped, then took a long time to increase back up to 38kW. "TX sample start" and "TX pulse sample delay" parameters changed at this time too.	Yes	by 03 scatters showers, more intense late morning, continuing through the afternoon and then becoming larger regions of rain by evening. Clears out by 20UTC	No	
30/08/2025		288		Yes	Moderate band of rain moves up from the SW during the early morning, breaks up into light to moderate showers, wind direction changes to a northerly and then showers move southwards during the afternoon. Clear after sunset.	Yes	Post-sunset
31/08/2025		288		No		Yes	During the morning, moderate echoes. Decrease by midday. Strong post sunset bloom, larger extent
01/09/2025		288		Yes	Light showers from noon, broad heavy rain from 1730.	No	
02/09/2025		288		Yes	Very heavy rain until about 03 UTC. Heavy showers from late morning into the afternoon becoming a broader region by late afternoon. Fading by sunset.	Yes	weaker post-sunset bloom
03/09/2025		288		No	Possible chaff cloud moves across the region during the afternoon. Very large +ve and -ve ZDR. Some weak precip echoes, moving west to east behind this, can be seen in the pose webcam, looks like virga.	Yes	weak clear air from 1100 UTC for a short period. Very strong post-sunset bloom to the west.

DATE	MISSING DATA	# OF SCANS	NOTES	WEATHER NOTES			
04/09/2025		285	ACU fault at 23:08. followed by TX fault. Not sure of cause. Data missing at 23:05, 23:10 and 23:20	No	Some rain moving towards the region just before midnight	Yes	Continuation of previous evening, then decrease, then increase after sunrise, but fairly weak signals up to noon.
05/09/2025		288		Yes	Heavy rain band approaches from the west early hours and fizzles out before reaching the radar, then convective showers during the morning and afternoon (9-17).	No	
06/09/2025		288		No		Yes	Weak daytime echoes, strong post-sunset bloom
07/09/2025		288		No		Yes	Weak daytime echoes, strong post-sunset bloom
08/09/2025		288		Yes	Rain to the north during the early evening, far range.	Yes	Slightly stronger daytime echoes until 13:00. Weak post-sunset bloom.
09/09/2025		288		Yes	Light showers during the morning, more widespread in the afternoon and stronger. A few light showers overnight.	No	
10/09/2025		288		Yes	Widespread rain moving north, heavier around midday, cleared east by mid afternoon	Yes	Moderate post sunset bloom
11/09/2025		288		Yes	Showers to the north west and north east afternoon and through the evening. Anchored to a particular point (orography?) from 2140 for about an hour, at 50km due west.	Yes	Interesting feature moves across the domain and over the radar at 17:30. Has high ZDR, low Z, but doesn't have the juxtaposition of very large +ve and large -ve ZDR for chaff like the other occasions we've seen that. So not sure. The webcam just shows total cloud at the site.
12/09/2025		288		Yes	Still showers forming 50km due west over the same location and forming a line SW to NE from that location e.g. from 1000. 2210 same feature again but the orientation of the band is more S to N.	Yes	0930-1230 weak clear air. Chaff 1220? North west and north east. Thin lines of echo.
13/09/2025		288		Yes	From 1510 again initiation of showers at the same location 50km to the west	No	
14/09/2025		288		Yes	Light rain early to mid morning	Yes	930 - 1500 but not very strong. Post sunset bloom but then weaken as light rain moves over

Scan Name	Elevations (°)	Scan Rate (°/s)	Pulse Width (μs)	Dual PRF Ratio
